

## Stack It Om-K

The classic OMK stacking chair was designed back in 1971 by Rodney Kinsman, comprising pressed steel seat and back attached to a continuous tubular frame. Constructed entirely from steel, the resulting chair is lightweight and extremely strong. The chairs can be stacked 25-plus high on a dolly and are available in a range of colours.

## Flan

Flan's seat is made from glossy technopolymer in either white or black. An optional upholstered seat is also available. The sled-style frame on the 551 model is finished in chrome, while the 550 has height adjustment and a polished aluminium cross base. As an option you can choose to have concealed spring-loaded castors on the swivel base that allow the stool to be easily moved when unloaded. Flan is available in a selection of standard heights.

## Elfin

Elfin is a versatile stool design by Ross Didier. Flip it upside down and you can fill it with ice for parties, earth for planting or paper waste in the office. Made from a high strength, 100 percent recyclable polymer, these stools are lightweight, stackable and comfortable to sit on. Moulded in unlimited colours and UV stabilised, they can be used indoors and out.

## A Stack Of Slabs

The Slab Chair from Tom Dixon is made from specially crowned oak in black and natural. The Slab Chair was borne out of the need for a stackable armchair. And with less components than a standard chair, the chair stacks underneath itself to save on space. Prices available on request.

## Poise 'n' Ivy

The Ivy collection is designed by Paola Navaone to look simultaneously heavy and solid yet lightweight and transparent, with a collection ranging from armchairs and lounges to tables. Inspired by topiary gardens the designs are intended to be placed outside and become part of the garden, as ivy and the garden grow up and around the pieces.
