

solid surface

Schiavello is a leading Australian fabricator of solid surface, specialising in diverse projects including corporate, residential, hospitality, healthcare, exhibition and retail environments.

Schiavello is a leading Australian fabricator of solid surface, specialising in diverse projects including corporate, hospitality, healthcare, exhibition and retail environments.

Solid surface is a vibrant and robust material, made of either acrylic or polymeric based material. Reminiscent of stone, the acrylic variety is a homogeneously composed, non-porous material, made up of, 1/3 acrylic resin [polymethyl methacrylate] and 2/3 natural mineral [alumina trihydrate]. The polymeric series is created from a unique blend of polyester resins and additives. This non-laminated uniformed product is capable of a multitude of aesthetic effects.

Unique capabilities of Schiavello Solid Surface

Schiavello’s advanced manufacturing capabilities include complex thermal forming (folding and slumping), construction engineering and CNC expertise, one of the few companies in Australia to offer such specialised services.

Applications

Solid surface is as diverse in application as it is in texture and colour. Common applications include:

- _Bench tops [commercial + residential]
- _Counters [reception or other]
- _Splashbacks (with grooves or patterns)
- _Stand alone table tops
- _Walls, screens, partitions
- _Integrated kitchen sinks / vanity basins
- _Thermo-formed products
- _Lighting + signage
- _Bathroom vanities, shower walls, shower bases and baths

Colours and finishes

The extensive range of colours and finishes available, deliver a unique point of difference to every project. Solid surface can resemble the familiar properties of natural stone and are also available in contemporary vibrant colours, or semi-translucent finishes. See over page for a snap shot of the vast colour options available.

Stronger than stone

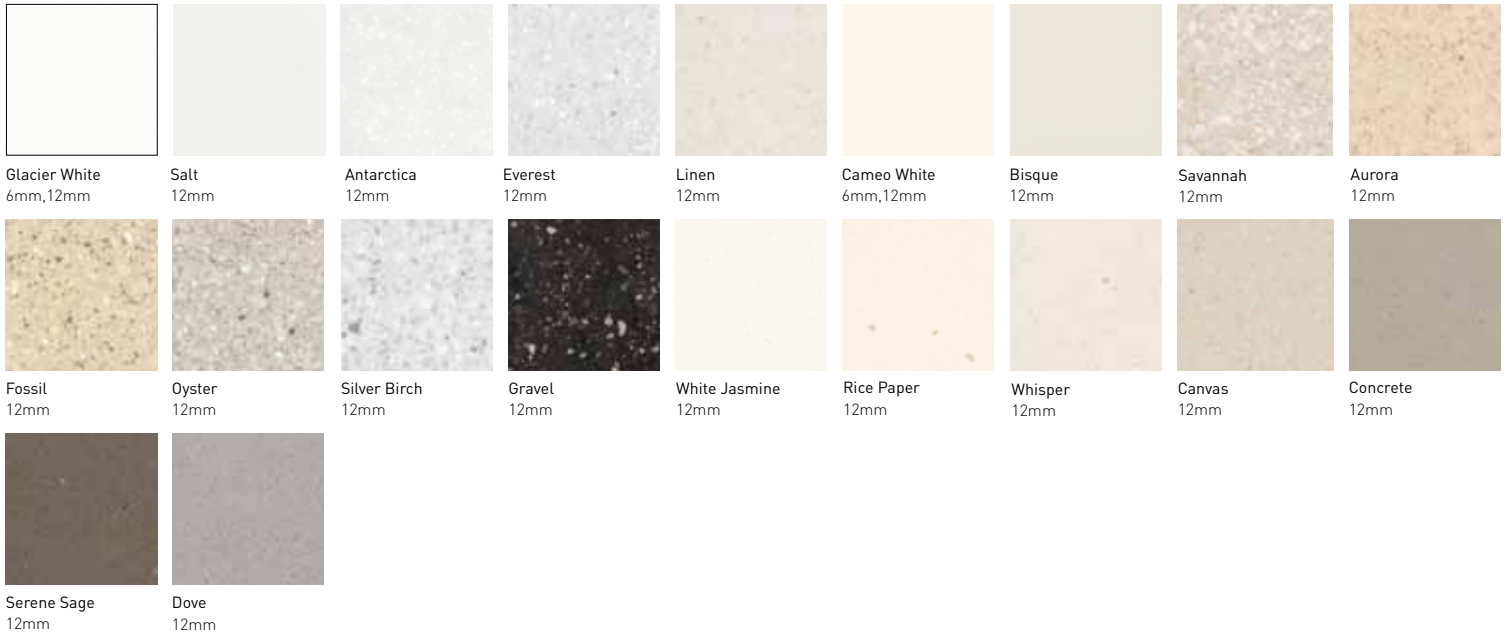

The acrylic and natural mineral composition make solid surface stronger than stone. The non-porous properties prevent permeation of liquids, resulting in a more tightly bonded surface, delivering a longer lasting finish.

Feature	Solid Surfaces	Stone + Reconstituted
Great colour range	yes	yes
Easy to clean + maintain for long-term appeal	yes	no
High stain resistance	yes	no
Non porous surface with anti-bacterial properties	yes	no
Seamless joins deliver a high quality finish	yes	no
Design versatility through malleability of substrate	yes	no
Colour consistency control across any span	yes	no
Easy to repair + return to original state	yes	no
Create cove splash backs	yes	no
